What this means

We found 23 barriers that can stop people with disabilities from using your site. Most can be fixed in under an hour by whoever manages your website. Websites with issues like these are the main target of ADA demand letters sent to small businesses.

Issues and how to fix them

High risk Text is too faint to read — 14 found on 2 page(s) Who it affects: Low-vision visitors can't read light gray text on white. How to fix: Darken the text color until it reaches a 4.5:1 contrast ratio (e.g. #a3a3a3 -> #595959). Example: <code></code> Example: <code>Retail<spa</code> WCAG: wcag2aa, wcag143 · Rule: color-contrast
High risk Images with no description — 7 found on 1 page(s) Who it affects: Blind visitors get no idea what the picture shows. How to fix: Add aria-label describing the image, or mark purely decorative images with role="presentation". Example: <code><div class="swiper-slide-bg elementor-ken-burns--active" role="img"></div></code> Example: <code><div class="swiper-slide-bg" role="img"></div></code> WCAG: wcag2a, wcag111 · Rule: role-img-alt
High risk Links with no name — 2 found on 2 page(s) Who it affects: Screen readers announce these as just "link", so blind visitors don't know where they go. How to fix: Add visible text or an aria-label, e.g. aria-label="Home". Example: <code></code> Example: <code></code> WCAG: wcag2a, wcag244, wcag412 · Rule: link-name
